ABSTRACT

Education is the key to success in everyone’s life as education and technical training have always been required for all forms of future development in India. Higher education and different levels of technical and non-technical institutions have been developing complex relationship in India. So the adaptability, implementation, acceptability, ethical knowledge and performance of professionals are always considered as key factors for the smooth running of educational system. The gathering of adequate information is important in establishing efficient professionals to ensure importance of the conceptual training program to the workforce. This paper consists of large amount of skills; knowledge and competition required and investigates into other skills and knowledge from time to time. The paper focuses on the basic concept of skills and knowledge required by the professionals to successfully run their professional life as well as on various issues, challenges and other concern areas for the development of professionals for the better India. Technical training should be provided in order to gain technical knowledge to the professionals. In order to develop the nation, the professionals should be keen to accept the challenges of education so that they can help in developing knowledge and skills of the youth. It is therefore extremely important to develop skills among the professionals for solving educational issues.
